Threat Intelligence Integration Report

1. Objective

The objective of this task is to integrate threat intelligence using AlienVault OTX, enrich alerts, and perform threat hunting for MITRE ATT&CK technique T1078 (Valid Accounts) using Wazuh.

2. Tools Used

Wazuh (SIEM)

AlienVault OTX (Threat Intelligence Platform)

TheHive (optional for incident response)

3. Threat Intelligence Integration (OTX)

3.1 Description

AlienVault OTX (Open Threat Exchange) is a threat intelligence platform that provides Indicators of Compromise (IOCs) such as malicious IPs, domains, and hashes.

3.2 Method

Instead of direct integration, IPs were manually checked in OTX to determine their reputation based on pulse data.

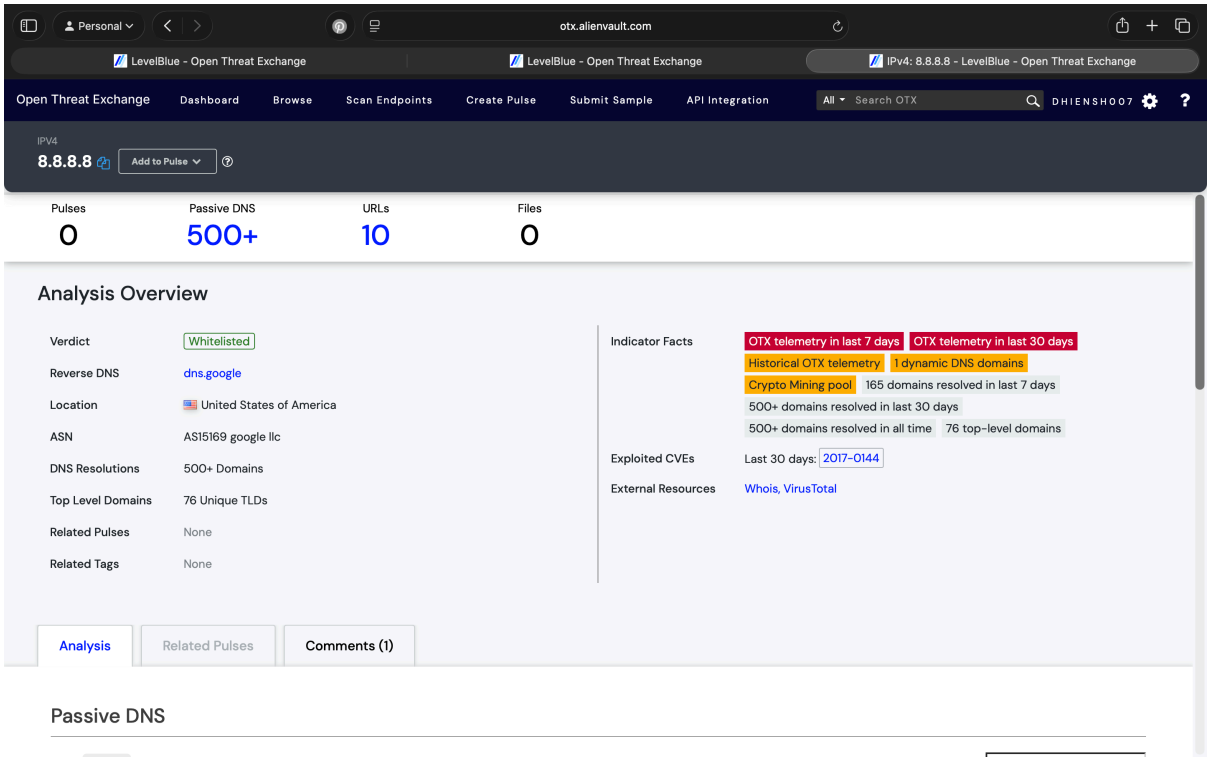
4. Alert Enrichment

4.1 OTX Enrichment Table

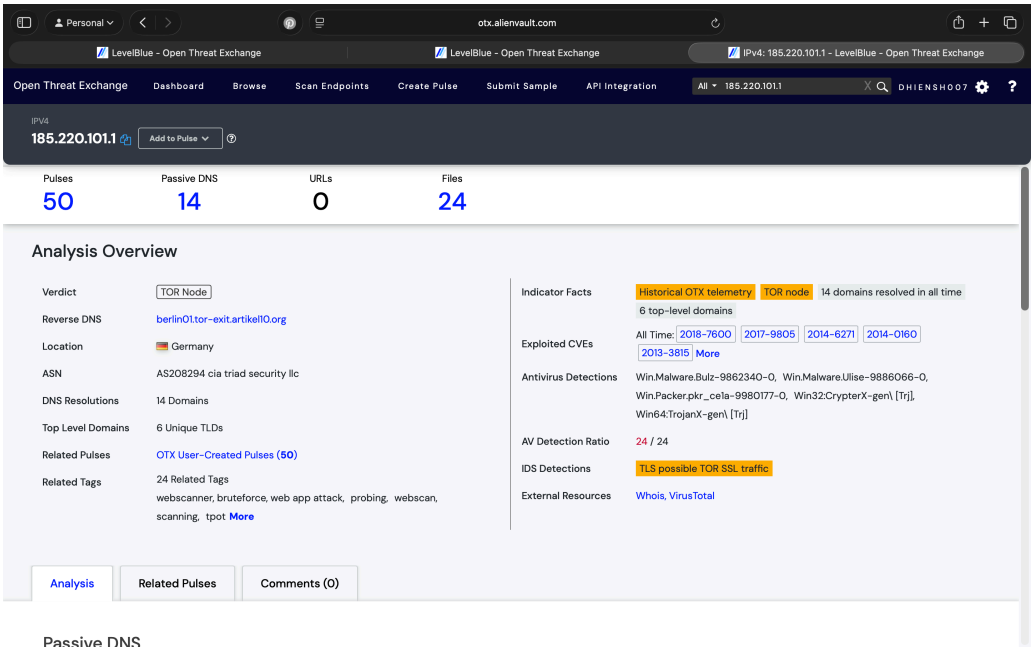
Alert ID	IP	Pulse Count	Reputation	Notes
3	8.8.8.8	0	Clean (OTX)	No malicious pulses found
4	185.220.101.1	50	Malicious (OTX)	TOR node, linked to attacks

5. Screenshots

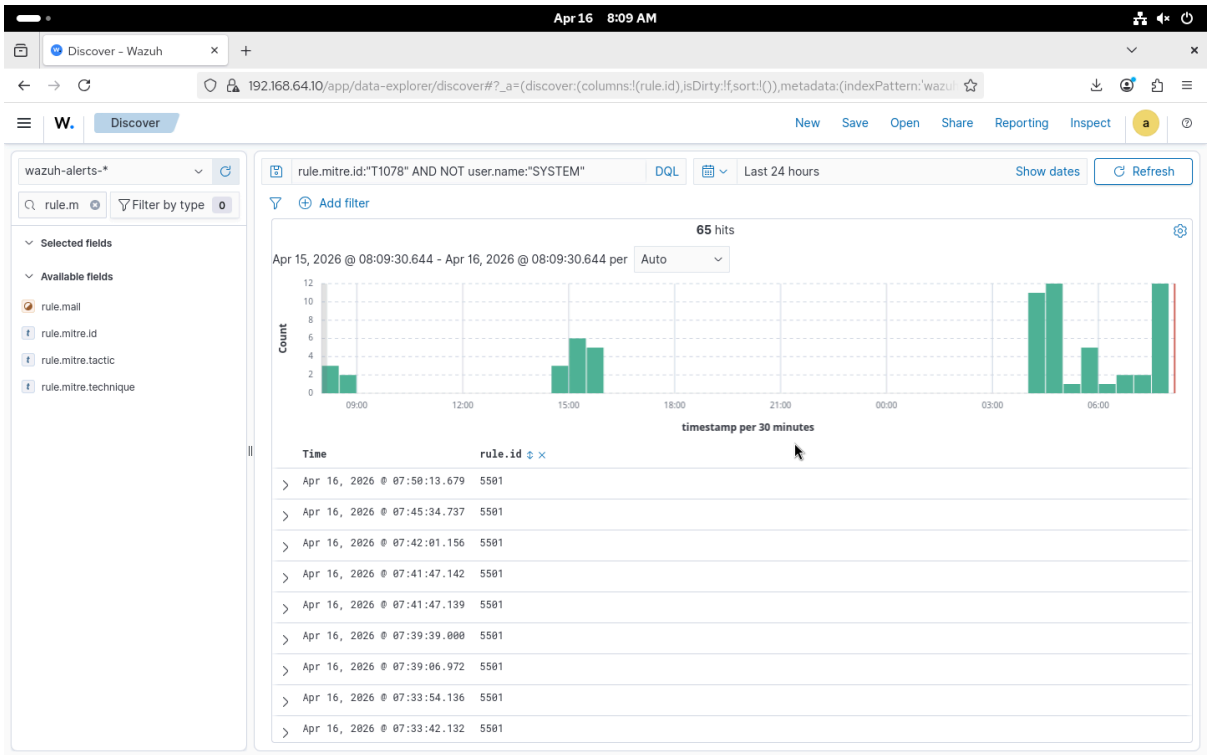
5.1 OTX Clean IP (8.8.8.8)



5.2 OTX Malicious IP (185.220.101.1)



5.3 Wazuh Query Execution



6. Threat Hunting (T1078 - Valid Accounts)

6.1 Description

MITRE ATT&CK Technique T1078 refers to attackers using valid credentials to gain unauthorized access.

6.2 Query Used

rule.mitre.id:"T1078" AND NOT user.name:"SYSTEM"

6.3 Observations

Multiple authentication events detected

Only non-system users were considered

No unusual login patterns observed

No suspicious accounts identified

7. Findings (50-word Summary)

Valid account activity (T1078) was analyzed by filtering non-system user logins in Wazuh logs. Multiple authentication events were observed across the timeline, indicating normal user activity. No unusual login patterns, suspicious accounts, or abnormal access times were detected, suggesting no evidence of credential compromise or unauthorized access.

8. Conclusion

The task successfully demonstrated threat intelligence usage through AlienVault OTX and threat hunting using Wazuh. Alert enrichment was performed by analyzing IP reputation, and no malicious authentication behavior was identified in the monitored environment.
